[download V01.00.00.00 - 11.03.99](#)

chgOrder.bas is the basic macro written by Andrei Columban. His notes are posted below.

ChgOrder is a MicroStation basic macro that change the display order of elements.

=====  
INSTALLATION  
=====

Copy chgorder.ba in your usn\_path\macros folder.

=====  
HOW TO USE IT  
=====

If you select some elements by selection tool or by fence and run the macro you will be prompted in a dialog box to send the selected elements to back or bring them in front of the others. If you run the macro without selecting any elements you will be able to manually select one element at the time and position it to back or to front.

I've tested the CHGORDER Microstation Basic macro on a InterServe MP-620 computer, under Windows NT 4.0 SP4. It works fine under MicroStation SE 05.07.01.14.

Use this software at your own risk!
